Professional Summary

GenAI & Full Stack Software Developer with **3+ years** of experience at **IBM**, building and deploying production-grade end-to-end GenAI, RAG, AI-driven systems and full stack web applications on cloud infrastructure. Proven ability to automate large-scale workflows, debug complex production issues, perform incident resolution and root cause analysis, develop proof-of-concept (POC) solutions, improve system reliability, and deliver measurable business impact. Experienced in leading teams, mentoring engineers, and collaborating across product, design and infrastructure functions.

Skills

AI / ML Integration: LLMs (Watsonx.ai, OpenAI, Hugging Face, Gemini), RAG, Agentic AI, Natural Language Processing, Machine Learning, Deep Learning

Frontend: HTML5, CSS3, Angular, React, TypeScript, Streamlit

Backend & Frameworks: Python, Flask, LangChain, Langraph, PHP (Laravel)

Databases & Vector Stores: IBM Db2, Milvus, ChromaDB, SQL

Cloud & DevOps: IBM Cloud, OpenShift, Docker, Version Control (Git), CI/CD Pipelines (Jenkins, Tekton, Cirrus), Secrets Manager, Cloud Object Storage, Shell Scripting

Security & Quality: Mend, Twistlock, ITSS-compliant Pipelines, Security Scanning, Performance Optimization

Testing: Unit Testing, Integration Testing, Test Automation

Core CS: Object-Oriented Programming, Data Structures & Algorithms

Professional Skills: Agile Delivery, Technical Leadership, Mentorship, Application Monitoring and Production Support, Root Cause Analysis, Incident Resolution, Debugging, Requirement Analysis, POC Development, Cross-functional Collaboration, Executive Communication

Work Experience

IBM India Private Limited, Bangalore

Full Stack Software Developer

Jan 2023 – Present (Joined as Intern: Jan–Jul 2023)

- Developed, unit-tested, deployed, and maintained user-centric **Full Stack Web Applications** using Angular, Laravel PHP, and IBM Db2, implementing context-aware exception handling to enhance application reliability, user experience, and maintainability.
- Engineered **2nd Place 1Q25 Client Advocacy Award Winning Excel-driven Batch Automation** for Sales role creation using Angular, Laravel PHP, and IBM Db2, reducing processing time from minutes per role to minutes for hundreds of roles (99% time reduction).

- Architected **Full Stack Automated Dashboards** using Angular and PHP, providing real-time feeder and process visibility, eliminating manual tracking and enabling one-click operational insights for application and leadership teams.
- Provided **Production Support**, performing deep production debugging, log analysis, and root cause investigations for critical application and infrastructure issues, enabling faster incident resolution and improved platform stability.
- Implemented secure, **ITSS-Compliant CI/CD Pipelines** with Mend and Twistlock security scanning, publishing audit-ready reports to Cloud Object Storage.
- Automated **10+ Operational Workflows**, monitoring tasks and incident-handling activities using python and shell scripting, saving 30+ hours per week and reducing operational errors by 30%.
- Rapidly developed **POCs and Production-Ready Prototypes** for emerging business requirements, automation initiatives, and AI/GenAI use cases, accelerating requirement validation, feasibility assessment, and solution delivery while reducing implementation risk.
- Led end-to-end **Vulnerability Remediation** by analysing Mend and Twistlock security reports, investigating CVEs using the GitHub Advisory Database and vendor security advisories, and coordinating dependency and container-image upgrades, served as the primary vulnerability-support contact, accelerating remediation and strengthening security compliance.
- Collaborated in Agile workflows with cross-functional teams through sprint planning, stand-ups, and code reviews.
- AI Highlights:
 - Led an 11-member team to develop **Judges' Award-winning Genie**, an AI developer copilot at IBM Developers Jumpstart, using IBM Granite, LLM-powered code analysis, and Graphviz to automate code explanations, flowcharts, and cross-version change summaries; reduced manual code-analysis effort by 60% and cut hours of work to minutes, accelerating debugging and impact analysis while enabling faster onboarding and clearer understanding of unfamiliar codebases.
 - Led a 6-member Agentic AI engineering team in architecting and delivering an AI-driven **DevOps Shift Handover Automation Agent** using IBM Watsonx Orchestrate, Python/FastAPI, ServiceNow, Box OAuth2, and Outlook, integrating incident triage, cloud payment status aggregation, operational reports, and automated email generation into a single workflow, cutting handover preparation from 15–30 minutes to under 1 minute, saving 250+ hours annually, and improving reporting accuracy and operational visibility across global operations.
 - Built and deployed an end to end IBM watsonx-powered, RAG-based enterprise **Project Modules Q&A Chatbot** using Flask, Milvus, W3 Search, Docker, and Jenkins CI/CD, grounding LLM responses in 100% of project documentation and reducing manual information retrieval by 90%.
 - Built an AI-assisted **Incident Management & Resolution Intelligence Platform** using Python, LLMs, embeddings, vector search, and RAG to retrieve and analyse historical incident knowledge, surface similar production issues, infer probable root causes, and generate actionable remediation recommendations, improving resolution efficiency by 40%.
 - Designed and implemented a **Prompt-Driven Test Case Automation Framework** that analyses application code and generates context-aware unit and integration test cases, improving test coverage by 30%, reducing manual QA effort, and accelerating software validation cycles.
 - Developed **Run Status Bot**, a natural-language chatbot that dynamically queries IBM Db2 to retrieve structured run-status data and uses LLMs to generate human-readable system health summaries for operational teams.

Project Work

LLM-Powered Multimodal Quiz Generator

- Engineered an end-to-end **Multimodal GenAI Quiz Generation Platform** that transforms text, documents, images, audio, video, and web URLs into context-aware MCQs through a unified, modular processing pipeline.
- Implemented LLM-Driven question generation and validation with Mistral, Prompt Engineering, OCR, Whisper audio transcription, MoviePy video processing, PyMuPDF, python-docx, and BeautifulSoup, with Streamlit delivering an interactive quiz-generation experience.

AI-Powered Personal Portfolio

- Designed, developed, and deployed a production-ready React/Flask **RAG-Powered Personal Portfolio Assistant**, enabling recruiters to explore professional experience, projects, skills, and achievements through natural-language queries with grounded responses to minimize hallucinations.
- Built the RAG pipeline using Llama 3.1 (8B), Sentence Transformers, ChromaDB, and Ollama, with Playwright-based content interaction and cloud deployment on Vercel, delivering a responsive, recruiter-facing AI experience.

Education

Ramachandra College of Engineering, Eluru | JNTU-Kakinada

Aug 2019 – May 2023

B.Tech in Computer Science and Engineering

CGPA: 8.14/10

Relevant Coursework: Object Oriented Programming, Databases, Data Structures and Algorithms, Operating Systems, Computer Networks, Machine Learning, Deep Learning, Artificial Intelligence, Data Mining, NLP, Advanced Data Structures and Algorithms, Information Retrieval, Image Processing.

Awards and Recognition

- **1st Place & Judges' Award** - IBM Developers Jumpstart (Multi-Agent LLM System).
- **2nd Place** - 1Q25 Client Advocacy Awards (Sales Plan Automation).

Academic Projects and Certifications

- Built a **Named Entity Recognition** system using Bi-LSTM, applying NLP techniques for sequence labeling and text classification.
- Developed ML-based **Housing Price Prediction** model applying regression analysis, EDA, and feature engineering using Python and Scikit-learn.
- Certified Machine Learning Intern at **Pantechelearning**.
